

Renewable district heating certificate

It is hereby certified that for the calendar year of 2024, according to an agreement with Vasakronan AB, Stockholm Exergi will allocate district heating volume based on renewable production corresponding to the entire volume Stockholm Exergi delivers to Vasakronan AB.

In this way, Vasakronan AB has exclusivity to this renewable district heating volume and associated environmental key figures. It will therefore not be included in Stockholm Exergi's reporting of environmental key figures for Stockholm's district heating for the year of 2024.

The environmental key figures that are reported by Stockholm Exergi in January each year is the so-called "residual mix", which corresponds to the district heating volume that is not bound by special agreements. This means that Vasakronan AB's environmental key figures for the year of 2024 will be excluded from the residual mix. An external auditor yearly verifies that the allocation has been carried out.
