

Renewable district heating certificate 2026

It is hereby certified that for the calendar year of 2026, according to an agreement with Vasakronan AB, Stockholm Exergi will allocate district heating volume based on renewable production corresponding to the entire volume Stockholm Exergi delivers to Vasakronan AB in accordance with Stockholm Exergi's product *Värme för Miljöredovisning*.

In this way, Vasakronan AB has exclusivity to this renewable district heating volume and associated environmental key figures. It will therefore not be included in Stockholm Exergi's reporting of environmental key figures for Stockholm's district heating for the year 2026.

Every January, environmental key figures are reported in Stockholm Exergi's *Miljönyckeltalsrapport*. The values for the product *Värme för miljöredovisning*, which correspond to the environmental values of Vasakronan AB, will in this report be presented separately from the district heating volume that is not tied through specific agreements. An external auditor yearly verifies that the allocation has been carried out.
